Planning for Water Supply Resiliency

Spokane River Forum Conference - April 2025

Being Resilient Means...

► Adaptable for current AND future situations

► **Protecting** our resources for the future

► Using water wisely with planning and conservation

Planning Improves Resiliency

City of Spokane's goal is to deliver clean and safe drinking water 24 | 7 | 365. It requires planning because:

► Major capital projects take a long time to build

► Must be adaptable to future change

► The expected is UNLIKELY to happen

Planning Provides Opportunity

Well Station **equipment** is approaching the **end of its useful life.**

Planning for the impacts of growth and climate change in updating, rehabilitating, and rebuilding well stations adds resiliency for a small additional cost.

Exploration at Well Electric

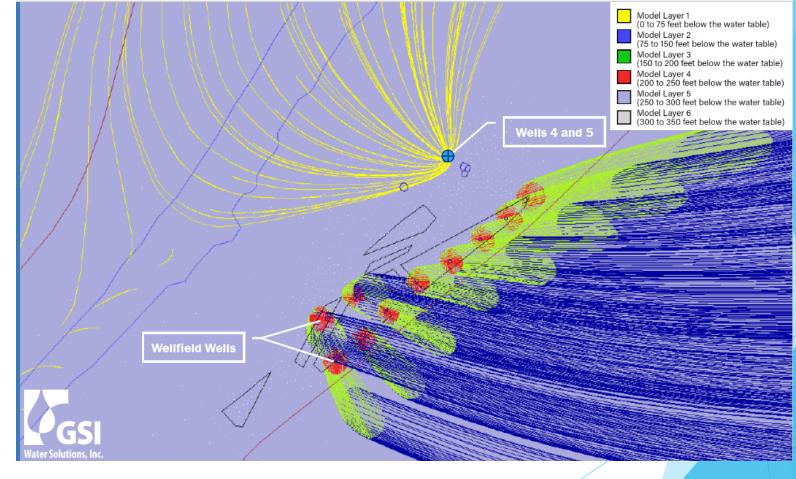

Building for the Future at Well Electric

Deeper wells reduce risk

Original modeling

Havana Well Station Part 2

► Needed for water supply south of I-90

► Resiliency from supply constraints at Well Electric and Parkwater well stations

► Study provided **guidance** for timing and prioritization

Ray Street Well Station

NEED:

- ▶ Pump
- **▶** Electrical Upgrades
- ▶ Power

More information guides the scope.

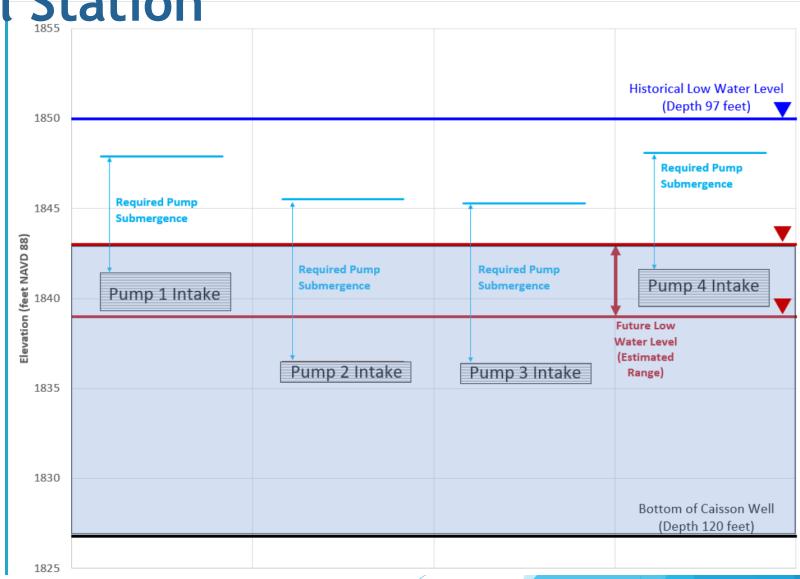

Nevada Well Station

Add Grace Well Station

- ► **NEED:** Pump and electrical upgrades.
- ► STUDY: Determine the detailed scope of work and the long-range supply for 50+ years.
- ► PLAN: Water Supply Resiliency planning for 2070 with changes in aquifer and growth.

Parkwater Well Station

► Last well station to study

► Benefit from lessons learned from other well stations

Water Wise Spokane
